

JSON

Create a JSON to contain a list of books, for each book the following information will be stored:

- Title
- Genre
- Author, can be list of authors
- Pages
- Published, date
- Read, true/false
- Website, can be blank

Displays the following information:

1. Name of each of the genres.
2. Title of books with more than 300 pages
3. Title of books published more than 2 years ago
4. Name of the authors and number of books they have written.
5. Title of the books read, ordered by date of publishing.

Create a button for each question.

Create a div that displays the information requested when each button is clicked.

For questions 2 and 3, in addition to the information in the div, the data answering the question will be highlighted.

For question 5, the books read should be highlighted, reorder the data shown as indicated in the question
